360° Pipeline Inspection Crawler

BOHEMIA, NEW YORK VJ Inspection Systems, a subsidiary of VJ Technologies, an industry leader in X-ray inspection products and technology, today entered the pipeline inspection market with the introduction of the first external pipeline inspection system that gives a full 360° radiographic view.

With the capability of inspecting above-ground natural gas, oil, or steam pipelines, the crawler is designed for 'In-Service' inspection of pipelines with no impact on live production. The system delivers a real-time 360 degree radiographic images. Testing of these in-use pipelines for structural integrity will be this units' primary function.
