VJ GROUP COVID-19 RESPONSE

Bohemia, NY – March 25, 2020: The COVID-19 pandemic has been an unexpected shock for all of us. During difficult and trying times like these, communication with our customers, suppliers, and partners is absolutely crucial. We are fortunate thus far to have been able to continue to operate in this environment and are happy to be in a position to continue to support our customers. The well-being of our people, our customers, our suppliers, and our partners is our top priority.

We have prepared our locations globally to respond quickly to any emerging situation, leveraging the considerable insights we've gained from our experience in China. Our China operations are back online, and our global presence will help to ensure that we will have support available for our customers around the world, regardless of what's happening at any specific location. To that end, all locations are following local and national government mandates within the states and countries where we operate. We are:

1. Conversing daily on a local and global basis to manage supply and demand for our customers
2. Engaging with all our critical suppliers to track the availability of raw materials; and
3. Coordinating with all our global manufacturing plants as the situation develops to ensure redundant manufacturing capacity and supply chain flexibility

At this time, our teams have indicated there are no known issues with our ability to meet the demand of our current orders. Additionally, based on current information, we do not anticipate any interruption in our continuity of supply in the near term. Our manufacturing facilities are open, and we are fortunate to have manufacturing capacity in many different countries around the world able to serve customers across regions. This diverse production base is an asset to our customers as we address any potential impacts resulting from the COVID-19 Coronavirus together.

As you are aware, the situation on the spread of the COVID-19 Coronavirus is very fluid, and we are keeping our organization in a proactive posture until the situation stabilizes globally. Although we cannot guarantee disruptions will not occur, we can assure you that if there is a change in our ability to supply our customers, we will promptly contact the affected customers. Additionally, we will work with the affected customers to try to mitigate any adverse effects of the COVID-19 Coronavirus.

Thank you for your business and your consideration in this matter.

Sincerely,
Vijay Alreja
President, VJ Group

PS: If you are developing items for response to the Covid-19 pandemic and need x-ray or CT services, we are offering reduced prices and priority lab-time at any of our labs located around the world.

About VJ Technologies

VJ Technologies designs, engineers and manufactures advanced X-ray solutions incorporating world-class imaging software and hardware systems for industry, academy, and government. An extensive R&D program drives leading edge products, and best in class technical support and maintenance ensures customer confidence and satisfaction throughout the product lifecycle.

VJ Technologies provides a complete range of DR and CT inspection services, from micro-focus through energies up to 9MeV via our network of “In-house” x-ray labs and mobile x-ray units. With AS9100 certification pending and inspections performed by ASNT and NAS 410 qualified Level 2 and Level 3 professionals supported by nationally recognized CT specialists, VJ Technologies is the company of choice of the aerospace, additive manufacturing, nuclear and automotive industries.

Founded in 1987, VJT is a leading global provider of x-ray inspection solutions with locations in the USA, UK, France, India and China to provide a true global level of service. We apply our radioscopic digital imaging expertise to governmental and nondestructive testing (NDT) markets throughout the world.

VJT develops and manufactures a complete line of automated, manual, and turnkey X-ray inspection systems. Primary market sectors include automotive, aerospace, electronics, nuclear, oil & gas, and pipe & weld applications. VJT x-ray inspection systems are used for radioscopic inspection of products and assemblies to detect defects or foreign matter, reducing cost and time while increasing quality and safety.

VJT delivers a competitive advantage over other companies through our network of global offices. In the 21st century, VJT continues to nurture emerging technologies and provide innovative solutions for global customers. Visit <http://www.vjt.com> for more information.
